

quartzite/marble +

The SatinStone™ Quartzite/Marble+ Collection offers a selection of quartzite/marble, limestone, and travertine each available in a gloss, satin, or suede finish. It is UV and heat resistant. The SatinStone™ Quartzite/Marble+ Collection does not require re-sealing, nor is it recommended.

Can SatinStone™ Quartzite/Marble+ be stained? There is no such thing as a stain proof countertop. However, SatinStone™ quartzite/marble, limestone, and travertine slabs are highly stain resistant. The SatinStone™ sealing process will not prevent etching from normal food acids such as wine, power drinks, tomato sauce, vinegar, and lemon juice. An etched surface will become more prone to staining. However some quartzite are less prone to etching than marble.*

How easy is it to maintain? Soap and water are all that's usually necessary for cleaning. Re-sealing is not necessary and is not recommended. An occasional application of Lemon Clean Pledge may be used to restore water beading and luster to your countertop. It also provides extra protection against acid etching.

Is it heat resistant? The SatinStone™ Quartzite/Marble+ Collection is extremely heat resistant for normal countertop use. Materials in this collection can be used as surrounds for wood or gas burning fireplaces with a properly prepared base.

Can it be used outdoors? Acid rain along with the particulates in rain can mechanically cause wear on the surface resulting in a change to the aesthetic. For this reason, SatinStone™ quartzite/marble, limestone, and travertine are not recommended for outdoor use. SatinStone™ Granite (suede finish) or Concrete is recommended for outdoor use.

**Most food stains can be removed with bleach.*
